No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

This cDNA sequence comprises the middle region of a cDNA clone comparises of the Ig superfamily with homology to CC member of a novel subclass of the Ig superfamily with homology to CC neural cell adhesion molecules. The 5' region (see AAV1985) cc and 3' region (see AAV1995) of the clone are also provided. The CC murine DS-CAM clone was isolated from a C57 Black/6 mouse brain CC cDNA library using human DS-CAM cDNA (see AAV1981) and AAV1988) as CC cDNA library using human DS-CAM cDNA (see AAV1988) as CC cDNA comparison vectors and host cells. The invention also provides human DS-CAM proteins (see CC probe. The invention also provides human DS-CAM proteins (see CC probe. The invention also provides human DS-CAM proteins (see CC probe. The invention also provides human DS-CAM proteins useful CC transgenic animals, antisense oligonucleotides, and primers useful CC mapplification of DS-CAM nucleic acids. DS-CAM polypeptides are associated with developmental and neurological processes. They can compare the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compa

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  δÃ
This cDNA clone codes for Down syndrome-cell adhesion molecule CC DS-CAM2 (see AAW42087), an extracellular, soluble protein belonging CC to a novel subclass of the 1g superfamily with highest homology to CC to anovel subclass of the 1g superfamily with highest homology to CC technique was applied to bacterial and P1 artificial chromosomes CC technique was applied to bacterial and P1 artificial chromosomes CC between ETS2 and MX1 by using cDNA from trisomy 21 human foetal CC brain. A unique cDNA fragment, designated E51 (see AAV31982), was CC brained and used to screen a trisomy 21 human foetal brain (14-wk CC obtained and used to screen a trisomy 21 human foetal brain (14-wk CC gestation) cDNA library. Further clones were obtained by exon CC trapping, and the complete DS-CAM2 cDNA sequence was identified. CC DS-CAM2 is a splice variant of membrane-bound DS-CAM1 (see AAW42086) and is deleted for the entire transmembrane domain. The DS-CAM come spans 900-1200 kb of genomic DNA and maps of thromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ps-CAM2; Down syndrome-cell address:

CC 21q22.2-22.3. The invention also provides murine US-CAM partial CC sequences (see AAV31985-87), expression vectors and host cells, cells ransgenic animals, antisense oligonucleotides, and primers useful CC for amplification of DS-CAM nucleic acid. DS-CAM polypeptides are CC associated with developmental and neurological processes. They can CC methods of repairing (regenerating) damaged or severed peripheral CC methods of repairing (regenerating) damaged or severed peripheral CC nerves. The products can also be used in detection, diagnossis and CC therapy of developmental and neurological abnormalities such as CC therapy of developmental and neurological abnormalities such as the corpus callosum, or schizencephaly. Antisense oligonucleotides are used for inhibiting translation of mRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ş

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           В
                           CC DS-CAM1 (see AAM42086), a cell surface glycoprotein belonging to a convel subclass of the 1g superiamity with highest homology to convel subclass of the 1g superiamity with highest homology to convel subclass of the 1g superiamity with highest homology to cell adhesion molecules. A modified direct cDNA selection cc technique was applied to bacterial and plantified chromosomes converged and MX1 by using cDNA from trisomy 21 human foetal contains and used to screen a trisomy 21 human foetal brain (14-wk cotained and used to screen a trisomy 21 human foetal brain (14-wk cotained and used to screen a trisomy 21 human foetal brain (14-wk cotained and used to screen a trisomy 21 human foetal brain (14-wk cotained and used to screen a trisomy 21 human foetal brain (14-wk cotained and used to screen a trisomy 21 human foetal brain (14-wk cotained and used to screen a trisomy 21 human foetal brain (14-wk cotained and used to screen a trisomy 21 human foetal brain (14-wk cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by exon cotained by e
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2887
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAV31981 standard; cDNA; 6604

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               transgenic animals, antisense oligonucleotides, and primers useful for amplification of DS-CAM nucleic acid. DS-CAM polypeptides are associated with developmental and neurological processes. They can be used in e.g. neural prosthetic devices used in entubulation methods of repairing (regenerating) damaged or severed peripheral nerves. The products can also be used in detection, diagnosis and therapy of developmental and neurological abnormalities such as Down syndrome, mental retardation, holoprosencephaly, agenesis of Down syndrome, mental retardation, holoprosencephaly, agenesis of the corpus callosum, or schizencephaly. Antisense oligonucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 6604 BP; 1673 A; 1827 C; 1768

the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful configuration of the invention may be used to treat diseases of the peripheral nervous containing a polypeptide or polynucleotide contained the peripheral nervous injuries, peripheral neuropathy and contrained neuropathy and contrained neuropathy and contrained neuropathy and contrained neuropathy and contrained neuropathy and contrained neuropathy and contrained neuropathy and contrained neuropathy and contrained neuropathy and contrained neuropathy and contrained neuropathy and contrained neuropathy and contrained neuropathy and contrained neuropathy and system disease, such as a local sease, amyotrophic contrained neuropathy and shy-Drager Syndrome. Other uses include the cutilisation of the activity chemotactic/chemokinetic activity, haemostatic activiny, inhibin activity, chemotactic/chemokinetic activity, haemostatic contrained neuropathy and therappy, drug screening, and thrombolytic activity, cancer diagnosis and therappy drug screening, and thrombolytic activity, arthritis and inflammation, leukaemias and contrained neuropathy activity, arthritis and inflammation, leukaemias and contrained neuropathy activity, arthritis and inflammation activity chemotactivity arthritis and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2769

The present sequence encodes one of 32 movel human secreted polypeptides. CC The nucleic acid molecules and polypeptides they encode may be used in CC the prevention, diagnosis and treatment of diseases such as CC immune disorders (e.g. mulliple sclerosis, systemic lupus erythematosus CC and human immuno-deficiency virus (HIV) infections), hyperproliferative CC and human immuno-deficiency virus (HIV) infections), hyperproliferative CC (e.g. Scimitar syndrome, Claya's cardiomyopathy and coronary CC (e.g. Scimitar syndrome, Claya's cardiomyopathy and coronary CC (e.g. Huntington's chorea Alzheimer's disease and parkinson's disease), CC (e.g. Huntington's chorea Alzheimer's disease and Parkinson's disease), CC (e.g. Huntington's chorea Alzheimer's disease and Parkinson's disease), CC (e.g. Huntington's chorea Alzheimer's disease and Parkinson's disease), CC (e.g. Huntington's chorea, Alzheimer's disease and Parkinson's disease), CC (e.g. Huntington's chorea, Alzheimer's disease and Parkinson's disease), CC (e.g. Huntington's chorea, Alzheimer's disease and Parkinson's disease), CC (e.g. Huntington's chorea, Alzheimer's disease and Parkinson's disease), CC (e.g. Huntington's chorea, Alzheimer's disease and Parkinson's disease), CC (e.g. Huntington's chorea, Alzheimer's disease and Parkinson's disease), CC (e.g. Huntington's chorea, Alzheimer's disease and Parkinson's disease), CC (e.g. Huntington's chorea, Alzheimer's disease and Parkinson's disease), CC (e.g. Huntington's chorea, Alzheimer's disease and Parkinson's disease), CC (e.g. Huntington's chorea, Alzheimer's disease and Parkinson's disease), CC (e.g. Huntington's chorea, Alzheimer's disease and Parkinson's disease), CC (e.g. Huntington's chorea, CC (e.g. Huntington's chorea, CC (e.g. Huntington's chorea, CC (e.g. Huntington's chorea, CC (e.g. Huntington's chorea, CC (e.g. Huntington's chorea, CC (e.g. Huntington's chorea, CC (e.g. Huntington's chorea, CC (e.g. Huntington's chorea, CC (e.g. Huntington's chorea, CC (e.g. Huntington's chorea, CC (e.g. Hunting

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CDS
                                                                                                                                                                                                                                                                                                                                                                                  The present sequence encodes the human aortic preferentially expressed gene 1 (APEG-1) polypeptide, which is aorta specific and inhibits the growth of smooth muscle cells. The APEG-1 polypeptide can be used to inhibit vascular smooth muscle cell proliferation in an animal via its introduction into an artery of the animal. In an animal via its introduction into an artery of the animal products derived from APEG-1 and the APEG-1 polypeptide can be used to diagnose and treat vascular conditions, e.g. restenosis, atherosclerosis, transplant arteriosclerosis or diabetes. at APEG-1 DNA, identified by differential expression in the aorta compared to ther organs, was used to obtain human APEG-1 DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       20-JUN-1996;

New gene useful for treating and diagnosing vascular diseases comprises a single gene encoding aortic-specific and striated-specific muscle cell isoforms

Disclosure; Fig 16; 88pp; English.

library. APIG-1 gene, located on human chromosome 293-34, encodes two muscle cell protein isoforms, one specific to aortic smooth encodes two muscle cell protein isoforms, one specific to aortic smooth muscle cells designated APEG-1 protein and the other specific to striated muscle cells designated SPEG protein.

APEG-1 protein can be administered to vascular smooth muscle cells (VSMC) to inhibit their prolliferation or migration at the site of vascular injury. The present sequence is used to screen vSMC-specific vascular injury. The present sequence is used to screen vSMC-specific expression. A enhancer sequence which is used to direct VSMC-specific expression of cis-acting transcriptional repressor sequence found in the 5' region of APEG-1 gene is useful to direct (compounds that bind to the repressor and increase APEG-1 expression in VSMC. APEG-1 is useful for treating and diagnosing vascular diseases such as alberosclerosis and restenosis. The present sequence is a cDNA encoding aortic-preferentially-expressed gene-1 (APEC-1) protein from a human lambda gtll aortic 5'-stretch cDNA

Sequence 1228 BP; 249 A; 363 C; 382 G; 231 T; 3 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The aortic preferentially expressed protein 1 (APEG-1) can be used to derive an enhancer/promoter. This linked to a polypeptide coding sequence which regulates smooth muscle cell-specific expression of the polypeptide coding sequence can be used as a method of inhibiting vascular smooth coding sequence can be used as a method of inhibiting vascular smooth enuscle cell proliferation. The nucleic acids are used to direct developmental stage-specific expression of a heterologous polypeptide developmental stage-specific expression of a heterologous polypeptide developmental stage-specific expression of a heterologous polypeptide developmental stage-specific expression of a heterologous polypeptide developmental stage-specific expression of a heterologous polypeptide developmental stage-specific expression of a heterologous polypeptide developmental stage-specific expression of a heterologous polypeptide developmental stage-specific expression of a heterologous polypeptide developmental stage-specific expression of a heterologous polypeptide developmental stage-specific expression of a heterologous polypeptide developmental stage-specific expression of a heterologous polypeptide developmental stage-specific expression of a heterologous polypeptide developmental stage-specific expression of a heterologous polypeptide developmental stage-specific expression of a heterologous polypeptide developmental stage-specific expression of a heterologous polypeptide developmental stage-specific expression of a heterologous polypeptide developmental stage-specific expression of a heterologous polypeptide developmental stage-specific expression of a heterologous polypeptide developmental stage-specific expression of a heterologous polypeptide developmental stage-specific expression of a heterologous polypeptide developmental stage-specific expression of a heterologous polypeptide developmental stage-specific expression of a heterologous polypeptide developmental stage-specific expression of a heterologous polypeptide developmental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          13-AUG-1998
